SUBJECT INDEX

Acquisition and extraction from cluttered backgrounds, target, 43
Acquisition performances, optical communications and laser beam, 14
Algorithms, comparison of imaging infrared detection, 26
Algorithms, optimal performance limits for detection and classification, 92
Algorithms for scene matching, Histogram-based, 99
Algorithms for video and forward looking infrared (FLIR) imagery, target classification, 134
Algorithms for target identification, comparative study of edge-thinning, 33
Antitank missile seeker employing an infrared Schottky barrier focal plane array, an, 158
Array development, infrared target, 2
Array, real-time statistical tracker for infrared focal plane, 178
Atmospheric Effects Library, the Electro-Optical Systems, 19
Automatic ship recognition using a passive radiometric sensor, 122

Backgrounds, target acquisition and extraction from cluttered, 43
Bearings-only passive ranging using Kalman-Bucy and Moore-Penrose methods, 152

Classification algorithms, optimal performance limits for detection and, 92
Classification algorithms for video and forward looking infrared (FLIR) imagery, target, 134
Classification using a new moment pattern recognition concept, infrared ship, 126
Clustering—an application to three-dimensional (3D) surface extraction, multidimensional, 60
Cluttered backgrounds, target acquisition and extraction from, 43
Communications and laser beam acquisition performances, optical, 14
Comparative study of edge-thinning algorithms for target identification, 33
Comparison of imaging infrared detection algorithms, 26
Compensation for a pushbroom scan, smear, 171
Correlation measures, tracking of obscured targets via generalized, 142
Correlation techniques for passive optical device detection, intensity, 66

Designing for stray radiation rejection, 81
Detection algorithms, comparison of imaging infrared, 26
Detection and classification algorithms, optimal performance limits for, 92
Detection, intensity correlation techniques for passive optical device, 66

SUBJECT INDEX

Acquisition and extraction from cluttered backgrounds, target, 43
Acquisition performances, optical communications and laser beam, 14
Algorithms, comparison of imaging infrared detection, 26
Algorithms, optimal performance limits for detection and classification, 92
Algorithms for scene matching, Histogram-based, 99
Algorithms for video and forward looking infrared (FLIR) imagery, target classification, 134
Algorithms for target identification, comparative study of edge-thinning, 33
Antitank missile seeker employing an infrared Schottky barrier focal plane array, an, 158
Array development, infrared target, 2
Array, real-time statistical tracker for infrared focal plane, 178
Atmospheric Effects Library, the Electro-Optical Systems, 19
Automatic ship recognition using a passive radiometric sensor, 122

Backgrounds, target acquisition and extraction from cluttered, 43
Bearings-only passive ranging using Kalman-Bucy and Moore-Penrose methods, 152

Classification algorithms, optimal performance limits for detection and, 92
Classification algorithms for video and forward looking infrared (FLIR) imagery, target, 134
Classification using a new moment pattern recognition concept, infrared ship, 126
Clustering—an application to three-dimensional (3D) surface extraction, multidimensional, 60
Cluttered backgrounds, target acquisition and extraction from, 43
Communications and laser beam acquisition performances, optical, 14
Comparative study of edge-thinning algorithms for target identification, 33
Comparison of imaging infrared detection algorithms, 26
Compensation for a pushbroom scan, smear, 171
Correlation measures, tracking of obscured targets via generalized, 142
Correlation techniques for passive optical device detection, intensity, 66

Designing for stray radiation rejection, 81
Detection algorithms, comparison of imaging infrared, 26
Detection and classification algorithms, optimal performance limits for, 92
Detection, intensity correlation techniques for passive optical device, 66

Discriminant functions (SDFs), inter-class discrimination using synthetic, 108
Discrimination using synthetic discriminant functions (SDFs), inter-class, 108

Edge enhancer, image analysis using polarized Hough transform and, 51
Edge-thinning algorithms for target identification, comparative study of, 33
Electro-Optical Systems Atmospheric Effects Library, The, 19
Eliminating nearest neighbor searches in estimating target orientation, 71
Enhancer, image analysis using polarized Hough transform and edge, 51
Extraction from cluttered backgrounds, target acquisition and, 43
Extraction, multidimensional clustering—an application to three-dimensional (3D) surface, 60

Feature analysis for forward looking infrared (FLIR) target identification, 117
(FLIR) target identification, feature analysis for forward looking infrared, 117
Focal plane array, an antitank missile seeker employing an infrared Schottky barrier, 158
Focal plane array, real-time statistical tracker for infrared, 178
Forward looking infrared (FLIR) imagery, target classification algorithms for video and, 134
Forward looking infrared (FLIR) target identification, feature analysis for, 117

Histogram-based algorithms for scene matching, 99
Hough transform and edge enhancer, image analysis using polarized, 51

Image analysis using polarized Hough transform and edge enhancer, 51
Imagery, target classification algorithms for video and forward looking infrared (FLIR), 134
Images of small vehicles, model for generating synthetic three-dimensional (3D), 8
Imaging infrared detection algorithms, comparison of, 26
Infrared detection algorithms, comparison of imaging, 26
Infrared (FLIR) imagery, target classification algorithms for video and forward looking, 134
Infrared (FLIR) target identification, feature analysis for forward looking, 117
Infrared focal plane array, real-time statistical tracker for, 178
Infrared Schottky barrier focal plane array, an antitank missile seeker employing an, 158
Infrared ship classification using a new moment pattern recognition concept, 126
Infrared target array development, 2
Intensity correlation techniques for passive optical device detection, 66
Inter-class discrimination using synthetic discriminant functions (SDFs), 108

Kalman-Bucy and Moore-Penrose methods, bearings-only passive ranging using, 152

Laser beam acquisition performances, optical communications and, 14
Library, The Electro-Optical Systems Atmospheric Effects, 19

Missile seeker employing an infrared Schottky barrier focal plane array, an antitank, 158
Model for generating synthetic three-dimensional (3D) images of small vehicles, 8
Moore-Penrose methods, bearings-only passive ranging using Kalman-Bucy and, 152
Multidimensional clustering—an application to three-dimensional (3D) surface extraction, 60

Nearest neighbor searches in estimating target orientation, eliminating, 71

Obscured targets via generalized correlation measures, tracking of, 142
Optical communications and laser beam acquisition performances, 14
Optical device detection, intensity correlation techniques for passive, 66
Optimal performance limits for detection and classification algorithms, 92
Orientation, eliminating nearest neighbor searches in estimating target, 71

Passive optical device detection, intensity correlation techniques for, 66
Passive radiometric sensor, automatic ship recognition using a, 122
Passive ranging using Kalman-Bucy and Moore-Penrose methods, bearings-only, 152
Pattern recognition concept, infrared ship classification using a new moment, 126
Performance limits for detection and classification algorithms, optimal, 92
Performances, optical communications and laser beam acquisition, 14
Polarized Hough transform and edge enhancer, image analysis using, 51
Pushbroom scan, smear compensation for a, 171

Radiation rejection, designing for stray, 81
Radiometric sensor, automatic ship recognition using a passive, 122
Ranging using Kalman-Bucy and Moore-Penrose methods, bearings-only passive, 152
Real-time statistical tracker for infrared focal plane array, 178
Recognition using a passive radiometric sensor, automatic ship, 122
Rejection, designing for stray radiation, 81

Scan, smear compensation for a pushbroom, 171
Scene matching, Histogram-based algorithms for, 99
Schottky barrier focal plane array, an antitank missile seeker employing an infrared, 158
Searches in estimating target orientation, eliminating nearest neighbor, 71
Seeker employing an infrared Schottky barrier focal plane array, an antitank missile, 158
Sensor, automatic ship recognition using a passive radiometric, 122
Ship classification using a new moment pattern recognition concept, infrared, 126
Ship recognition using a passive radiometric sensor, automatic, 122
Small vehicles, model for generating synthetic three-dimensional (3D) images of, 8
Smear compensation for a pushbroom scan, 171
Statistical tracker for infrared focal plane array, real-time, 178
Stray radiation rejection, designing for, 81
Surface extraction, multidimensional clustering—an application to three-dimensional, 60
Synthetic discriminant functions (SDFs), inter-class discrimination using, 108
Synthetic three-dimensional (3-D) images of small vehicles, model for generating, 8

Target acquisition and extraction from cluttered backgrounds, 43
Target array development, infrared, 2
Target classification algorithms for video and forward looking infrared (FLIR) imagery, 134
Target identification, comparative study of edge-thinning algorithms for, 33
Target identification, feature analysis for forward looking infrared (FLIR), 117
Target orientation, eliminating nearest neighbor searches in estimating, 71

Targets via generalized correlation measures, tracking of obscured, 142
Three-dimensional (3D) images of small vehicles, model for generating synthetic, 8
Three-dimensional (3D) surface extraction, multidimensional clustering—an application to, 60
Tracker for infrared (IR) focal plane array, real-time statistical, 178
Tracking of obscured targets via generalized correlation measures, 142
Transform and edge enhancer, image analysis using polarized Hough, 51

Vehicles, model for generating synthetic three-dimensional (3D) images of small, 8
Video and forward looking infrared (FLIR) imagery, target classification algorithms for, 134
